

Association of Diving Contractors International

Saturation Emergency Contact List

Gulf of Mexico

27 January 2026

Guidance Notes:

1. ADCI does not assume any liability for incorrect or incomplete listing of contractors/suppliers.
2. Contacts and numbers are valid as of January 27, 2026. Member companies are encouraged to notify the ADCI Executive Director or the Saturation Subcommittee Chairman of any changes, additions, or deletions to this listing.
3. This document is intended to assist saturation providers with emergency planning and response for their respective companies. Saturation providers are encouraged to verify the numbers and contacts pre-job and incorporate this document in their emergency response planning. This listing should be considered as a starting point only and should not be considered complete and comprehensive. The listed contractors may not be offering all of their services when an emergency occurs, and new contractors may have entered the theater on a permanent or temporary basis.
4. Contractors receiving a call for assistance are requested to actively support the party in distress by making calls for them or volunteering information on additional options to which the party may not be aware.
5. In the event of an emergency, (i.e.: dropped bell), saturation companies are encouraged to consider all potential options including Atmospheric Diving Systems (ADS), Remote Operated Vehicles (ROV), and surface supplied mixed gas diving if applicable.
6. Prior to commencement of diving operations and regularly throughout, it is highly recommended to review vessel Automatic Identification System (AIS) data to identify other vessels operating in the immediate range of operations which may be capable of rendering emergency assistance.
7. Saturation providers should be aware of the locations and availability of Hyperbaric Rescue Facilities (HRF) and their suitability with respect to mating of their Hyperbaric Rescue Chamber (HRC) or Self-Propelled Hyperbaric Lifeboat (SPHL). Providers are listed below for reference.
8. Saturation Contractors are advised to conduct periodic drills to simulate various saturation emergencies in which they may require outside support.

ADCI

Phil Newsum	Executive Director	713-732-2574
Billy Bratkowski	Sat. Committee Chairman	337-654-6883

Contractors – Service(s) Provided

Aqueos Corporation – SATURATION – HRF - ROV
